User Focus & Productivity App

=> A User can enter into one of the four predefined Focus Modes (Work, Play, Rest, Sleep).

Once they're in a particular mode, that focus mode starts with a timer.

The timer shows the current time in 00:00 form, when the timer crosses an hour mark then you show the current time in 00:00:00 format.

Every 2 minutes the user gets a Point and a badge.

Here are the possible badges -

     1. trees: [" 🌱 ", " 🌲 ", " 🌲 ", " 🌳 ", " 🌴 "]
     2. leaves & fungi: [" 🍂 ", " 🍁 ", " 🍄 "]
     3. animals: [" 🐅 ", " 🦅 ", " 🐵 ", " 🐝 "]

Assign **any** one badge from any badge type at random for every point.

-- The focus mode is active until the user (you) manually taps on the Stop Focusing Button,

Handle **Edge cases** where the User closes the app.

- Ideally, the user should be redirected to the same focus mode which was active.
- The Session Points shouldn't be lost.

From the Home View, add a button to navigate to the Profile View.

Prefill the User name, and a User image and store it into the DB.

Layout of the Profile View

-- User Image In the Center

-- User Name

-- Total points Accumulated

-- Total Badges - Show the badges

-- Recent Sessions

-- List of Recent Sessions

Each Session Should Have

-- Name

-- Duration of Session

-- Points Earned

-- Session Start time
